Global shortfall
Key populations and their partners accounted for more than half of all new HIV infections globally in 2018.

Resource gap
Global rate of new HIV infections burden versus funds needed and funds made available.

- Burden: 54%
- Needed: $6.8 billion
- Funded: $1.3 billion
- 80% missing

Data from the 2020 report ‘Fast-Track or Off Track: How insufficient funding for key populations jeopardises ending AIDS by 2030’
